Claims 5 and 8/1&5 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 7/05/06.

The election requirement is hereby made final, since the functional limitations of the non-elected claims are believed to represent patentably distinct species.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Thompson in view of Nakano.

Thompson teaches a common rail high-pressure injection system wherein the fuel pressure in the rail is monitored constantly and the injection is correlated to the pressure sensed at a particular time. This pressure further related to the identification of particular engine cylinders. The exact method of pressure sensing is not completely disclosed.

Nakano teaches a common rail fuel system used for a high-pressure injection engine wherein the rail pressure is sensed using a sampling method that includes a set time period. Since the sampling is done in this way, it will also be done during a lapse of a given time period.

It would have been obvious to modify Thompson by using the sampling technique of Nakano to sense the rail pressure because both systems were high-pressure injection systems wherein the exact rail pressure would have been a critical factor in order to maintain a desired injection quantity.

Claims 2-3 and 6-7 are allowed.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
